Professional Summary

Automation architect with 16+ years of professional experience across quality engineering, software development and systems administration in industrial automation, healthcare, logistics and SaaS. Designs modular, distributed and self-healing test frameworks for desktop, web, mobile and APIs. Leads teams of 5–6 engineers and works with US and European stakeholders to define automation strategies and integrate testing into CI/CD pipelines.

Technical Skills

Architecture: Hybrid and modular frameworks, Page Object Model (POM), parallel and distributed execution, self-healing automation

Tools and languages: Selenium, Playwright, WinAppDriver, Appium, REST Assured, NUnit, Coded UI; C#, Java, Python

API testing: REST API automation, contract testing, schema validation

CI/CD and cloud: GitHub Actions, Jenkins, TeamCity, Azure DevOps; exposure to AWS and Azure Cloud

Leadership: Test strategy, Agile delivery, hiring, technical mentoring, US/EU stakeholder communication, innovation management

Professional Experience

Senior Specialist – Quality Engineering | LTIMindtree (LTM)

Bangalore, India | Jul 2025 – Present

- Developed an AI-driven web API automation framework that dynamically generates and executes test cases from prompts, reducing manual scripting effort by approximately 60%.
- Architected an AI-based Playwright framework for scalable web automation and reusable test coverage.
- Architected a scalable desktop automation framework using WinAppDriver and C#/.NET.
- Created automation estimates and implementation plans to align scope, timelines and execution priorities.
- Implemented self-healing locator strategies, reducing flaky test failures by approximately 40%.
- Enabled fully unattended execution, reducing manual intervention by approximately 70% and accelerating feedback cycles.
- Designed distributed execution with TCP-based orchestration, improving execution scalability by approximately 50%.
- Built GitHub Actions CI/CD pipelines to run WinAppDriver regression suites automatically.

Lead Engineer – Technology Quality Assurance | RXO

Mumbai, India | Nov 2021 – May 2025

- Integrated automation into CI/CD pipelines, reducing release cycle time by approximately 30%.
- Automated hundreds of regression scenarios across microservices modules and designed scalable UI and mobile frameworks using Selenium and Appium in C#.
- Enhanced defect detection processes, improving early detection by approximately 35%.
- Led a team of 5–6 automation engineers, including hiring and technical mentoring.

Technical Lead | HCL Technologies

Pune, India | Apr 2018 – Nov 2021

- Built Selenium-based automation architecture, improving QA lifecycle efficiency by approximately 15%, and led sanity and regression automation initiatives.
- Led teams delivering software solutions to client requirements and mentored junior developers in coding and problem-solving.

Senior SDET – Products | Icertis

Pune, India | Aug 2017 – Feb 2018

- Developed automated testing frameworks for enterprise SaaS, reducing testing effort by approximately 20%.
- Conducted code reviews to verify compliance with design specifications and coding standards.

Senior Systems Engineer | Siemens

Bangalore, India | Oct 2014 – Aug 2017

- Designed system architectures to improve operational performance and collaborated with cross-functional teams on integration strategies for industrial automation software.
- Implemented automation tools and streamlined processes to reduce manual validation and repetitive tasks.

Senior Software Engineer | Infinite Computer Solutions (Deputed to Philips)

Bangalore, India | Apr 2014 – Sep 2014

- Automated validation workflows for Philips MRI systems using Coded UI in C#.
- Designed system architecture and developed, tested and maintained .NET applications to improve performance and reliability.

Software Design Engineer – Test | Magana Infotech (Deputed to Samsung)

Bangalore, India | Aug 2013 – Apr 2014

- Developed REST API and Selenium automation frameworks in C#.
- Collaborated with cross-functional teams to analyse requirements, conducted code reviews and managed multiple projects to meet delivery timelines.

Software Engineer | Randstad (Deputed to Philips)

Bangalore, India | Dec 2012 – Jun 2013

- Developed automated testing frameworks and NUnit-based white-box tests to improve test coverage and software reliability.
- Diagnosed and resolved software defects to maintain system integrity and minimise downtime.

System Administrator | Patel Microdata Pvt. Ltd.

Mumbai, India | Oct 2007 – Jul 2010

- Configured and maintained server infrastructure, managed network security and implemented data backup solutions.
- Managed enterprise systems and automation scripts, supporting audit compliance for Tribon M3 ship design software.

Innovation

- Submitted 8+ invention disclosures spanning client and parent organisations, demonstrating a consistent record of innovation across healthcare, engineering and physics.
- Contributed to automation intelligence, distributed systems and test optimisation initiatives for enterprise systems.

Education

Master of Science in Medical Software

Manipal University, Manipal, Karnataka | May 2012

Bachelor of Engineering in Information Technology

Shivaji University, Kolhapur, Maharashtra | Jul 2007
